S06869
NyOthetical protein (gene N internal ORF) - bovine coronavirus (strain F15)
N.Alternate names: IORF protein
C; Species: bovine coronavirus
C; Species: J.201-1998 #sequence_revision 17-Jul-1998 #text_change 16-Jul-1999
C; Accession: S06869
A; Title: Sequence and analysis of bovine enteritic coronavirus (F15) genome. I. - Sequen
A; Reference number: S06869
A; MUD: 89087718
A; Reference number: S06869
A; Mulb: 89087718
A; Residues: 1-207 <CRU>
A; Molecule type: genomic RNA
A; Residues: 1-207 <CRU>
A; Note: the source is designated as bovine enteritic coronavirus
C; Comment: The gene encoding this protein is located within the nucleocapsid (N) gene.
C; Superfamily: coronavirus gene N internal ORF
A:Accession: JQ1174
A:Molecule type: genomic RNA
A:Residues: 1-207 <VERS-
A:Experimental source: strain Minnesota
A:Experimental source: strain Minnesota
C;Comment: The gene encoding this protein is located within the nucleocapsid (N) gene.
C;Superfamily: coronavirus gene N internal ORF
                                                                                                                                                                                                                                                                                                             ó;

                              This peptide represents a linear derivative of the protegrin family of peptide antibiotics. Protegrin antibiotics form part of the peptide antibiotic family which contain a beta-sheet secondary structure linked by disulphide bridges. The new derivatives are linear and lack the disulphide bridge. The newell derivatives are linear and lack the agents to an organism, e.g. therappeutic proteins, antibodies (or their fragments), nucleic acid, oligonucleotides, ribozymes, antitumour agents, antivirals and anti-inflammatories, etc. The derivatives are non-toxic and non-lytic but can cross mammallan cell membranes rapidly by a passive including crossing the blood-brain barrier.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence is a specifically claimed example of a peptide, recombinantly produced, corresponding to the generic formula: A1-A2-A3-A4-A5-Cys-A7-Cys-A9-A10-A11-A12-Cys-A14-Cys-A16-(A17-A18) where A1 = a basic amino acid; A2 and A3 = a small amino acid; A4 = a basic or small amino acid; A5 A7 and A14 = a hydrophobic amino acid; A9, A12 and A16 = a basic, hydrophobic, neutral/polar or small amino acid; A10 and A11 = a basic, hydrophobic, neutral/polar or small amino acid or proline; A17 may be absent or a basic, neutral/polar,

hydrophobic or small amino acid; and A18 may be absent or a basic,
neutral/polar, hydrophobic or small amino acid. This has a charge of
least +3 and its N-terminal acylated and/or C-terminal amidated or
esterified forms, all of which may contain a disulphide bond to give a
cysteine bridge. This peptide is in snake form where all the
cysteine residues are replaced by a hydrophobic, small or large polar
amino acid (e.g. alanine in this case). Peptides of this formula are
designated protegrins and are useful as anti-bacterial, anti-viral and
canti-fungal agents in plants and animals. The protegrins confer
resistance to microbial or viral infection in plants by preventing the
from a virus or microbe and inactivate the endotoxin of gram-
negative bacteria. The protegrins are particularly useful for the
treatment of sexually transmitted disease caused by microorganisms e.g.
Candida albicans, HIV-1, Chlamydia trachomatis, Treponema pallidum and
Neisseria quorrhoace. They can also be used in eye care solutions and
as preservatives for food. The protegrins are more effective under
physiological conditions (e.g. in the presence of serum) than certain

cc where Al = a basic amino acid; A2 and A3 = a small amino acid; A4 = a basic or small amino acid; A5, A7 and A14 = a hydrophobic amino acid; A5, A7 and A14 = a hydrophobic amino acid; A12 and A16 = a basic, hydrophobic, neutral/polar or small amino acid; A10 and A11 = a basic, hydrophobic, neutral/polar or small amino acid; A17 may be absent or a basic, hydrophobic or small amino acid; and A18 may be absent or a basic, hydrophobic or small amino acid. This has a charge of at least +3 and its Nterminal acylated and/or C-terminal amidated or esterified forms, all of which may contain a disulphide bond to give a cystene bridge. This peptide is in snake form where all the cystene bridge. This peptide is in snake form where all the cystene bridge. This peptide is in snake form where all the cystene bridge. This peptide is in snake form where all the cystene bridge. This peptide is in snake form where all the cystene bridge. This peptide is in snake form where all the cystene bridge. This peptide is in snake form where all the cystene bridge. This peptide is in snake form where all the cystene bridge apends in plants and animals. The protegrins confer resistance to microbia or viral infection in plants by preventing the growth of a virus or microbe and inactivate the endotoxin of gramrestanent of sexually transmitted disease caused by microorganisms eggenedations, HIV-1, Chlamydia trachomatis; Treponema pallidum and Naisseria gonorrhoeae. They can also be used in eye care solutions and as preservatives for food. The protegrins are more effective under physiological conditions (e.g. in the presence of serum) than certain cynthic and are non-toxic to the cells of higher organisms.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö

                                                                                                                                                                                                                                                                                                                                                             The present sequence is an antimicrobial protegrin peptide, which has a broad spectrum of activity against microbial targets, including gram-postitive and gram-negative bacteria, yeast, fungl, protozoa and certain strains of viruses and retroviruses, e.g. HIV. It can be used to preserve or disinfect a variety of materials, including madical equipment, foodstuffs, cosmetics, contact lens solutions, medicaments or other nutrient containing materials. It infections or diseases in plants and animals, e.g. conjunctivitis, keratitis, conneal ulcers, stomach ulcers associated with Helicobacter pylori, sexually transmitted diseases, gram-negative sepsis, endocarditis, pneumonia and other respiratory infections,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       urinary tract infections, systemic conditions and oral mucositis. It is biostatic or biocidal against clinically relevant pathogens exhibiting multi-drug resistance, e.g. vancomycin resistant Enterococcus faecium or faecalis, penicillin resistant Streptococcus pneumoniae and methicillin resistant Staphylococcus aureus (MRSA). It is given at a dosage of 0.1 to 5, preferably 0.5 to 1 mg/Kg/day, by injection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Antibacterial; antiviral; antifungal; antibiotic; endotoxin; Candida albicans; gram-negative bacteria; STD; sexually transmitted disease; HIV-1; Chlamydia trachomatis; Treponema pallidum; Neisseria gonorrhoeae; eye care; preservative;

Cationic, antimicrobial, virus-neutralising protegrin peptide(s) useful for the treatment of microbial infection, as food preservatives and in eye care solutions

Claim 6; Page 65; 106pp; English.

The present sequence is a specifically claimed example of a peptide, recombinantly produced, corresponding to the generic formula:

Cal-A2-A3-A4-A5-Cys-A7-Cys-A9-A10-A11-A12-Cys-A14-Cys-A16-(A17-A18)

Where A1 = a basic amino acid; A2 and A3 = a small amino acid; A4 = a basic, hydrophobic, neutral/polar or small amino acid; A9, A12 and A16 = a basic, hydrophobic, neutral/polar or small amino acid; A10 and A11 = a basic, hydrophobic, neutral/polar or small amino acid; A10 and A11 = a basic, hydrophobic, neutral/polar or small amino acid; A10 and A11 = a basic, hydrophobic, neutral/polar or small amino acid; and A18 may be absent or a basic, neutral/polar, hydrophobic or small amino acid; and A18 may be absent or a basic, neutral/polar, hydrophobic or small amino acid. This has a charge of a restrainfied forms, all of which may contain a disulphide bond to give a cysteline bridge. Peptides of this formula are designated protegrins and are useful as anti-bacterial, anti-viral and anti-fungal agents in a re useful as anti-bacterial, anti-viral and anti-fungal agents in continuation of a virus or microbe are particularly useful for the treatment of sexually transmitted are particularly useful for the treatment of sexually transmitted trachmatis, Treponema pallidum and Neisseria gonorhoeae. They can also be used in eye care solutions and as preservatives for food. The presence of serum) than certain antibiotics and are non-toxic to the alls of the presence of serum) than certain antibiotics and are non-toxic to the cells of higher organisms.

                                                                                                                                                                                                                                                          This peptide represents a linear derivative of the protegrin family of peptide antibiotics. Protegrin antibiotics form part of the peptide antibiotic family which contain a beta-sheet secondary structure linked by disulphide bridges. The new derivatives are linear and lack the disulphide bridge. The new derivatives are linear and lack the gents to an organism, e.g. therapeutic proteins, antibodies for their fragments), nucleic acid, oligonucleotides, ribozymes, antibumour agents, antivirals and anti-inflammatories, etc. The derivatives are non-toxic mechanism, so can deliver active agents to cytoplasm and non-live active agents including crossing the blood-brain barrier.

The specification describes a pharmaceutical composition, which comprises at least one anticancer agent associated with at least one peptide that can transport it into cancer cells and which inhibits development of resistance to the anticancer agent. By using the peptide as a vector for delivery of the anticancer agent, mechanisms that cause cancer cells to become resistant to the agent, particularly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             the P-glycoprotein pump, are avoided. Also, peptides are easily produced by chemical synthesis, can be coupled easily to the agent, cross mimmalian cell membranes rapidly by a passive mechanism (no receptors required), and are non-toxic and non-lytic. The compositions are used to treat cancer. The present sequence represents a peptide which may be linked to the anticancer agents of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                          New composition useful for cancer treatment and prevention, contains anticancer agent and peptide vector that transports agent into cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Antibacterial; antiviral; antifungal; antibiotic; endotoxin; Candida albicans; gram-negative bacteria; STD; sexually transmitted disease; HIV-1; Chlamydia trachomatis; Treponema pallidum; Neisseria gonorrhoeae; eye care; preservative;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Cationic, antimicrobial, virus-neutralising protegrin peptide(s) useful for the treatment of microbial infection, as food preservatives and in eye care solutions

The present sequence is a specifically claimed example of a peptide, recombinantly produced, corresponding to the generic formula: recombinantly produced, corresponding to the generic formula: A1-A2-A3-A4-S1-Cys-A3-Cys-A3-Cys-A3-A4-Cys-A16-(A17-A18)

A1-A2-A3-A4-A5-Cys-A3-Cys-A3-A10-A11-A12-Cys-A14-Cys-A16-(A17-A18)

C A4-A5-Cys-A3-A7-Cys-A3-A10-A11-A12-Cys-A14-Cys-A16-(A17-A18)

Dasic or small amino acid; A2 and A3 = a small amino acid; A3 and A16 = a basic, hydrophobic, neutral/polar or small amino acid; A10 and A11 = a basic, hydrophobic, neutral/polar or small amino acid; A10 and A11 = a basic, rydrophobic, neutral/polar or small amino acid; and A18 may be absent or a basic, neutral/polar, hydrophobic or small amino acid; This has a charge of a central/polar, hydrophobic, or small amino acid. This has a charge of a central/polar, hydrophobic, or small amino acid. This has a charge of a sterified forms, all of which may contain a disulphide bond to give a cystenie bridge. This peptide is in snake form where all the cystenie bridge. This peptide is in snake form where all the cystenie bridge. This peptide is a noti-bacterial, anti-viral and are useful a are useful as anti-bacterial, anti-viral and anti-fungal agents in plants and animals. The protegrins confer growth of a virus or microbia or viral infection in plants by preventing the crossistance to microbial or viral infection in plants by preventing the growth of a virus or microbe and inactivate the endotoxin of gramtrement of sexually transmitted disease caused by microorganisms e.g. candid a lablacas, HTV-1, chlamydia trachomatis, Treponema pallidum and as preservatives for food. The protegrins are more effective under completions (e.g. in the presence of serum) than certain very physiological conditions (e.g. in the presence of serum) than certain very by the conditions (e.g. in the presence of serum) than certain very conditions and are non-toxic to the cells of higher organisms.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ;

```
comprises at least one anticancer agent associated with at least one peptide that can transport it into cancer cells and which inhibits development of resistance to the anticancer agent. By using the peptide as a vector for delivery of the anticancer agent, mechanisms that cause cancer cells to become resistant to the agent, methanisms the Psylooprotein pump, are avoided. Also, peptides are easily produced by chemical synthesis, can be coupled easily to the agent, cross mammalian cell membranes rapidly by a passive mechanism (no receptors required), and are non-toxic and non-lytic. The compositions are used to treat cancer. The present sequence represents a peptide
                                                                                                                                                                                                                                                                                                                                                           Gaps

                                               The present sequence is an antimicrobial protegrin peptide, which has a broad spectrum of activity against microbial targets, including gram-positive and gram-negative bacteria, yeast, fungi, protozoa and certain strains of viruses and retroviruses, e.g. HIV.

It can be used to preserve or disinfect a variety of materials, including medical equipment, foodstuffs, cosmetics, contact lens solutions, medicaments or other nutrient containing materials. It can also be used for the prophylaxis or treatment of microbial infections or diseases in plants and animals, e.g. conjunctivitis, keratitis, corneal ulcres, stomach ulcres associated with Helicobacter pylori, sexually transmitted diseases, gram-negative sepsis, endocarditis, pneumonia and other respiratory infections, urinary tract infections, systemic candidiasis and oral mucositis. It is biostatic or biocidal against clinically relevant pathogens exhibiting multi-drug resistance, e.g. vancomycin resistant candidiating multi-drug resistance, e.g. vancomycin resistant Staphylococcus cureus (MRSA). It is given at a dosage of 0.1 to 5, preferably 0.5 to 1 mg/kg/day, by injection.
                                                                                                                                                                                                                                                                                                                                                                                           Gaps

This peptide represents a linear derivative of the protegrin family of antibiotics. Protegrin antibiotics form part of the peptide antibiotic family which contain a beta-sheet secondary structure linked by disulphide bridges. The new derivatives are linear and lack the disulphide bridge. The new derivatives are linear and lack the disulphide bridge. The new derivatives are used to deliver active agents to an organism, e.g. therapeutic proteins, antibodies (or their fragments), nucleic acid, oligonucleotides, ribozymes, antitumour agents antivirals and anti-inflammatories, etc. The derivatives are non-toxic mechanism, so can deliver active agents the chart of the protein and non-live active agents to cytoplasm and nucleus,
                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Candida albicans; gram-negative bacteria; STD;

The present sequence is a specifically claimed example of a peptide, recombinantly produced, corresponding to the generic formula:

A1-A3-A4-S-Cys-A7-Cys-A9-A10-A11-A12-Cys-A14-Cys-A16-(A17-A18)

where A1 = a basic amino acid; A5, A7 and A1 = a Mydrophobic amino acid; A6 and A1 = a basic, hydrophobic, neutral/polar or small amino acid; A10 and A11 = a basic, hydrophobic, neutral/polar or small amino acid; A10 and A11 = a basic, hydrophobic, neutral/polar or small amino acid; A10 and A11 = a basic, hydrophobic, neutral/polar or small amino acid; A10 and A11 = a basic, hydrophobic, neutral/polar or small amino acid; and A18 may be absent or a basic, hydrophobic or small amino acid; and A18 may be absent or a basic, neutral/polar, hydrophobic or small amino acid; and A18 may be absent or a basic, neutral/polar, hydrophobic or small amino acid; and A18 may be absent or a basic, neutral/polar, hydrophobic or small amino acid; and A18 may be absent or a basic, neutral/polar, hydrophobic or small amino acid; and A18 may be absent or a basic, neutral/polar, hydrophobic or small amino acid; and A18 may be absent or a basic, neutral/polar, hydrophobic or small anil anil acide or creaminal anidated or esterified forms, all of which may contain a disulphide bond to give a cysteine bridge. Peptides of this formula are designated protegrins and animals. The protegrins confer resistance to microbial or viral infection in plants by preventing the growth of a virus or microbe are aparticularly useful for the treatment of sexually transmitted
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   disease caused by microorganisms e.g. Candida albicans, HIV-1, Chlamydia trachomatis, Treponema pallidum and Neisseria gonorrhoeae. They can also be used in eye care solutions and as preservatives for food. The protegrins are more effective under physiological conditions (e.g. in the presence of serum) than certain antibiotics and are non-toxic to the cells of higher organisms.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Antibacterial; antiviral; antifungal; antibiotic; endotoxin; Candida albicans; gram-negative bacteria; STD; sexually transmitted disease; HIV-1; Chlamydia trachomatis; Treponema pallidum; Neisseria gonorrhoeae; eye care; preservative;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ;

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

IS UBCELLULAR LOCATION: LOOSELY BOUND TO THE INNER THYLAKOID MEMBRANE SURFACE IN CHLOROPLASTS.
-!- SIMILARITY: THERE ARE 12 DIFFERENCES BETWEEN THE SEQUENCE OF POPLAR PLASTOCYANINS A AND B.
-!- SIMILARITY: CONTAINS 1 PLASTOCYANIN-LIKE DOMAIN.

1-1 SUBUNIT: HONOTETRAMER (POTENTIAL).

1-1 DISEASE: A DEFICIENCY IN THE RYANDOINE RECEPTOR MAY BE THE CAUSE OF MALIGNANT HYPRETHEMIA (MH) AND OF CENTRAL CORE DISEASE OF MUSCLE (CCD). MH IS AN AUTOSOMAL DOMINAT DISORDER OF SKELETAL MUSCLE AND IS ONE OF THE MIN CAUSES OF DEATH DUE TO ANESTHEIR. PEOPLE, AN MH EDISODE CAN BE TRIGGERED BY ALL COMMONLY USED INHALATIONAL ANESHETICS SUCH AS HALCHARNE AND BY DEPOLARIZING MUSCLE RELAANTS SUCH AS SUCCINICALINE. THE CLINICAL FEATURES OF THE MYOPATHY ARE HYPERTHERMIA, ACCELERATED MUSCLE METABOLISM, CONTRACTURES, METABOLIC ACIDOSIS, TACHYCARDIA AND DEATH, IF NOT TRRATED WITH THE POSTSYNAPTIC MUSCLE RELAXANT, DANY TRRATED WITH THE POSTSYNAPTIC MUSCLE RELAXANT, VITROLENE. SUSCEPTIBILITY TO MH CAN BE DETERMINED WITH THE "IN VITROLENES INDUCED IN STRIPS OF MUSCLE TISSUE BY CAFFEINE ALONE AND HALCHARR ALONE. PATIENTS WITH NORMAL RESPONSE ARE MH NORMAL (MH)), THOSE WITH ABNORMAL RESPONSE ARE MH NORMAL ALONE ARE MH EQUIYOCAL (MHE(C) AND MEH(H) RESPECTIVELY).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    MEDIINE-20081079; Pubmed-10612851; Gencik M., Gencik M., Mortier W., Epplen J.T.; "Novel mutation in the RYR1 gene (R2454C) in a patient with malignant

SUBCELLULAR LOCATION: LOOSELY BOUND TO THE INNER THYLAROID MEMBRANE SURFACE IN CHLOROPLASTS.

SMILARTY: THERE ARE 12 DIFFERENCES BETWEEN THE SEQUENCE OF POPLAR PLASTOCYANINS A AND B. SIMILARIY: CONTAINS I PLASTOCYANIN-LIKE DOMAIN.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

DNA-binding protein WRKY3 homolog F3L17.120 - Arabidopsis thaliana C;Species: Arabidopsis thaliana (mouse-ear cress)
C;Date: 16-011-1999 #sequence_revision 16-Jul-1999 #text_change 15-Oct-1999
C;Accession: T10689
R;Bevan, M.; Murphy, G.; Ridley, P.; Hudson, S.; Bancroft, I.; Mewes, H.W.; Mayer, K. submitted to the Protein Sequence Database, June 1999
A;Recerence number: 216652
A;Accession: T10685
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  hypothetical protein F25H2.6 - Caenorhabditis elegans

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  RESULT 12
S5246
transposable retroelement homolog - perennial teosinte
N;Alternate names: ZLRS7 protein, long repetitive sequence protein ZLRS 7
C;Species: Zea diploperennis (perennial teosinte)
C;bate: 07-May-1995 *sequence_revision 21-Jul-1995 *text_change 07-Dec-1999
C;Accession: UC4641; S52246
